Synopsis: About 6.1 years of total experience in Information Technology Industry with Strong Knowledge in all phases of Software Development Life Cycle (SDLC) such as developing, testing, Migrating, Administrating, security management and production support

Experience Summary:

- Blue Prism certified developer.
- Good knowledge on RPA tool Blue Prism. Expertise in working with Object studio, Process studio, Application modeler.
- Have set up Blue prism deployments for various environments and DR setup.
- Worked extensively with Blue prism application servers, Interactive clients and runtime resources (bots).
- Good knowledge in automating desktop and web applications and Excel operations.
- Automated several complex business processes to minimize human intervention and provide more accuracy and added more value to business.
- Exception handling design and correct use of stages and blocks.
- Have lead several teams to deliver quality process automations and involved in designing automation frameworks.
- Minimal knowledge on Automation Anywhere and UI Path.
- Expertise in SQL queries, Unix platform and minimal knowledge on Shell scripting and VB Scripting.
- Completed MongoDB DBA learning course from MongoDB University.
- Good Understanding on Client tools (Designer, Import Wizard, and Web Intelligence Rich client, CMC and LCM in Business Objects).
- An effective communication with excellent relationship building & interpersonal skills.
- Motivation to take independent responsibility as well as ability to contribute and be a productive team member.
- Good expertise in BO installation, Administration, security management and server management and production support.
- Ace Award winner in Delivery Excellence & Production support for individual Performance in previous assignment.
- Experience in working with Agile methodology.

Technical Skills:

Blue Prism, BizTalk 2010,2013, ESB tool kit, Neuron ESB, MOSS 2007/2010/2013, C# .Net, WCF, SQL 2008,TFS,Visual studio 2012,Azure.

Knowledge and Trained on: Blueprism Open span, UI path.

Project #01:

Current Project:

Organization : Xyz
Role : **Blueprism Solution Architect**
Project Name : Xyz
Environment : Blue Prism v5 and v6.1, SQL Server 2012
Duration : Xyz

Description:

Xyz is a widely recognized national leader in the specialty insurance business with close to 50 years experience in the manufactured housing insurance sector; the company delivers specialized products and services for residential property and the recreational market. One of our newest lies is pet health insurance. The company is head quartered in suburban Cincinnati, Ohio

Project involves Automation of various business processes like Bulk Lines, Leasing Desk, Agent license verification, New Agent subset up etc.

Role and Responsibilities

- Drive the strategic and tactical roll-out of the RPA solution to clients by creating and documenting test procedures and scenarios for the pre-UAT phases and supporting the Operational Teams during the UAT and rollout phases
- Analyze and understand business processes and produce specification artifacts including design automated solutions with standard design principles, conventions, scope, trade-offs, and conceptual and logical architectures.
- Support existing processes and implementing change requirements as part of a structured change control process as well as problem solving issues that arise in day to day running of RPA processes and providing timely responses and solutions as required.
- Manage code review sessions to ensure that best practices and procedures are implemented while recommending modifications and optimization
- Involved in the full end to end journey of process automation including identifying suitable candidates, designing and developing a Blue Prism solution as well as integrating the automated process into business areas.

Project# 02:

Organization	:	XYZ
Role	:	XYZ
Project Name	:	XYZ
Environment	:	Blue Prism, UI Path, Libra DB Tools, SQL Server 2012
Role	:	Solution Architect and Project Lead
Duration	:	XYZ

Description: Project involves automation of Back office operations of bank using the Robotic Process automation mechanism. Major automation on indexing and fulfillment processes for both SARS (South Africa Revenue Services) and SAPS (South Africa Police Services)/Civil maintenance request received by subpoena department.

Role and Responsibilities

- Analyze and understand business processes and produce specification artifacts including design automated solutions with standard design principles, conventions, scope, trade-offs, and conceptual and logical architectures.
- Support existing processes and implementing change requirements as part of a structured change control process as well as problem solving issues that arise in day to day running of RPA processes and providing timely responses and solutions as required.
- Manage code review sessions to ensure that best practices and procedures are implemented while recommending modifications and optimization
- Involved in the full end to end journey of process automation including identifying suitable candidates, designing and developing a Blue Prism solution as well as integrating the automated process into business areas.
- Managing team of 25 and Mentoring new members of the automation team, testing automated processes and managing stakeholder expectations
- Working within project planning constraints, communicating any identified project risks and issues to the delivery/project manager accordingly and providing inputs to the change control process
- Deliver Robotic Process Automation (RPA) to a growing customer base by contributing and driving an overall solution design in order to meet the customer's specifications and needs
- Developing robotic and cognitive solutions to transform the Business and IT operations of global clients

Project #03

Organization : Xyz
Role : Associate – Projects
Project Name : XYZ
Environment : Blue Prism, SQL Server 2012
Role : RPA Developer
Duration : Xyz

Role and Responsibilities

- Analyzing and Understanding the business requirements.
- Working Excel VBO operations.
- Working with Collection manipulations and different VBO utilities.
- Created different actions to remove duplicate values in Collections.
- Working with different Spy modes Win32, Active accessibility and Region mode in application modeler.
- Working with queues to manage more items within bots.
- Working with Schedules, release management.
- Fixing the issues that occur in different environments for new as well as existing functionalities.
- Unit testing of newly coded automations.
- Handling in-product maintenance activities like archiving logs.
- Managing Users and their roles.

Project #04

Organization : Xyz
Role : Associate – Projects
Project Name : Xyz
Environment : Blue Prism, SQL Server 2008 R2
Role : RPA Developer
Duration : Xyz

Role and Responsibilities

- Attending training sessions on Blue Prism.
- Understanding the architecture of Blue Prism and its components.
- Deployment of a POC environment of Blue Prism to showcase to client.
- Gathering requirements from Client and identifying solutions.

- Analyzing the manual process thoroughly for a better process automation.
- Working with Application modeler, Object studio, Process studio and Control room.
- Working with Releases to move content from one environment to other environment.
- Working with Blue Prism Application server.
- Worked on Different type of Stages Action, Calculation, Multi Calculation, Read, and Write, Page, Recover, Resume, Loop, Decision and Data Items.
